FACULTY OF HUMANITIES AND SCIENCE

LEARNING OUTCOME BASED CURRICULUM

CURRICULUM & SYLLABUS

(2022-REGULATION)

MASTER OF SCIENCE
CYBER FORENSICS AND INFORMATION SECURITY

DEPARTMENT
OF
COMPUTER SCIENCE AND ENGINEERING

Course :M.Sc (CFIS)

Vision:

To become a Premier Institution of Excellence in Computer Science and Engineering that would develop self-sustaining and globallycompetent Computer Science and Information Technology Professionals.

Mission:

M1 Enable students and faculty with the best of Technologies and Knowledge emerging in the domain of Computer Science and Engineering.

M2 Equip the department laboratories with the power of in-demand Technologies and Software for the On-Demand Industry.

M3 Share and Collaborate knowledge across the IT Industries for holistic development of skilled and talented students.

M4 Impart the students with Ethical values, Critical thinking and Broad-based computational skills, to enable students to become Entrepreneurs.

M5 Motivate the students to comprehend problems across Inter Disciplinary Domains and offer innovative solution using ICT.

Program Educational Objectives (PEO)

PEO1: Apply knowledge and skills acquired to solve the issues in real world network and cyber security areas and to develop feasible and reliable systems to prevent and protect systems from security attack.

PEO2: Demonstrate Environmental, Legal, Cultural, Social, Ethical, Public Safety Issues and work as a member of a team and communicate effectively across team members.

PEO3: Exposure to emerging cutting edge technologies and train them in the field of Computer network, Network security and Cyber security related issues.

PEO4: Operate various security related commercial software tools to solve scientific and business problems.

PEO5: Start career as Security Engineers, Cyber Security Analysts, Cyber Forensic Professionals, Security Architects and Administrators in Organizations or as Scientists at various levels in Research Establishments.

Program Outcomes (PO)

PO1: Acquire in-depth knowledge related to the discipline.

PO2: Apply the recent advancement in the domain knowledge for solving real-life problems.

PO3: Demonstrate critical thinking skills by analyzing, synthesizing and evaluating various research problems.

PO4: Identify and use qualitative and quantitative methods of research in order to pursue a well-researched written work that makes use of wide range of disciplinary techniques and scientific methods applicable.

PO5: Conceive the ways and means to address various social, economic, environmental, human rights and other ethical issues faced by humanity at the local, national and global levels.

PO6: Demonstrate Professional, leadership and Management skills required for professional development and employability.

PO7: Demonstrate the ability for collaborative work and scientific communication through projects, internship and on-site training.

PO8: Use mathematical, analytical, statistical and information technology tools.

PO9: Ability to update knowledge and skills, participating in learning activities throughout life, through self-paced and self-directed learning aimed at personal development.

Program Specific Outcomes (PSO)

PSO1: Gain the knowledge and professional skill of cyber forensics and information security to provide ethical solutions to cyber threats, vulnerabilities, exploits and crime investigations.

PSO2: Assess various cyber-security risk management policies and technologiesand identify a method to protect an organization's critical information and assets.

PSO3: Formulate, update and communicate short-term and long-term organizational cyber-security strategies and policies.

PSO4: Use software or tools to analyze existing cyber-security strategies and policies.

SEMESTER – I

Subject Code: HMCF22001	Subject Name : MATHEMATICS FOR INFORMATION SECURITY	Ty/Lb/ETL	L	T/S.Lr	P/R	C
	Prerequisite: NIL	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

This paper will help a student to understand:

- The basic mathematic concepts used in information security field.
- The different cryptographic algorithm and generation of keys
- The working of cryptographic hashing functions and their applications.
- The message authentication codes and its various applications.

COURSE OUTCOMES (COs) : (3- 5)At the end of this course the students would be able to

CO1	Understand thelatest concepts in discrete mathematics, probability and cryptography.
CO2	Apply the mathematic symmetric and asymmetric algorithms related to cryptography
CO3	Evaluate the authentication and hash algorithms.
CO4	Designor modify authentication policies and system level security.
CO5	Deploy appropriate encryption techniques to secure data in transit across data.

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9

Subject Code: HMCF22001	Subject Name	Ty/Lb/ETL	L	T/S.Lr	P/R	C
	MATHEMATICS FOR INFORMATION SECURITY	Ty	3	0/0	0/0	3

Unit I –Introduction to Mathematic Concepts **11 Hrs**

Number Theory – Divisibility, Factors, Prime numbers – Properties of Divisibility - Representation of Integers in Different Bases –Conversion of Decimal to Binary, Octal and Hexadecimal values - Greatest Common Divisor and Least Common Multiple - The Integers –– Primitive Roots and the Discrete Logarithm – Polynomials and Finite Fields – The Ring of Polynomials ––Congruence Calculus or Modular Arithmetic – Modular Square Roots.

Unit II –Introduction to Cryptography **9 Hrs**

Introduction to Cryptography – The Objectives of Cryptography – Symmetric-Key Encryption – Steam Ciphers – Block Ciphers – DES – AES – Modes of Operation – Public-Key Cryptography – Concepts of Public-Key Cryptography – RSA – Key Generation and Encryption – Digital Signatures – Attacks against RSA

Unit III–Cryptographic Hash Functions **8 Hrs**

Cryptographic Hash Functions – Security requirements for Hash functions – Construction of Hash functions – Data Integrity and Message Authentication – Signatures with Hash functions – Message Digest – MD5 - Secure Hashing Algorithm – SHA1 and SHA2.

Unit IV–Discrete Algorithm and Protocols **8 Hrs**

Elgamal's Encryption – ElGamal's Signature Scheme – Digital Signature Algorithm – Rabin's Encryption – Rabin's Signature Scheme – Key Exchange and Entity Authentication – Kerberos – Diffie-Hellman Key Agreement – Key Exchange and Mutual Authentication – Station-to-Station Protocol – Public-Key Management Techniques.

Unit V–Message Authentication Codes **9 Hrs**

Secure communication and Message integrity – Encryption vs Message Authentication – Message Authentication Codes – Constructing Secure Message Authentication Codes – CBC-MAC – Collision Resistant Hash Functions – Weaker notions of Security for Hash functions – A Generic "Birthday" Attack – The Merkle -Damgard Transform – Collision-Resistant Hash Functions in Practice.

Total Hrs: 45

Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

- To understand forensic software and hardware
- To understand the windows and linux file systems
- To gain insight data recovery tools

COURSE OUTCOMES (COs) : (3- 5) At the end of this course the students would be able to

CO1	Understand data acquisition techniques and data retrieval techniques in a forensically sound manner so that the evidence can be presented in court.
CO2	Identify suitable techniques and procedures to perform a digital investigation, analysis of physical storage media and perform volume analysis and acquisition of artifacts that reside in hard disks and random access memory
CO3	Design forensic disk image analysis and reporting and windows registry examining strategies to uncover forensic evidences and analyze Windows event logs
CO4	Perform live analysis, capture volatile data, make images of media, analyze files systems, analyze network traffic, analyze files, perform memory analysis, and analyze malware on a Linux system
CO5	Learn tools used for investigation

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

	ADVANCED DIGITAL FORENSICS	Ty	3	1/0	0/0	4

Unit I - Digital Forensics **12 Hrs**

Phases of Digital Forensics – Seizure of Digital Information – Handheld forensics - Forensic Software and Hardware - Analysis and Advanced Tools - Forensic Technology and Practices - Forensic Ballistics and Photography, Face, Iris and Fingerprint Recognition, Audio Video Analysis.

Unit II - Disk and file system analysis **12 Hrs**

Media analysis concepts – the sleuth kit – partitioning and disk layouts – special containers – hashing – carving – forensic imaging – CD and DVD Forensics – Router Forensics

Unit III - Windows Forensics **12 Hrs**

Windows file systems – Registry – event logs – recycle bin - prefetch files – shortcut files – windows executables – Volatile and Non-Volatile information – Windows Memory Analysis – Executable File Analysis – Metadata – IIS Logs – Parsing DHCP Server and Windows Firewall logs – Evaluating Account Management Events – Examining Audit-Policy Change Events, System Log entries and Application Log entries

UnitIV - Linux systems artefact **12 Hrs**

Linux file systems – File Analysis - Linux boot process and services – Linux system organization and artifacts – user accounts – home directories – logs – scheduling tasks – Linux Forensic Tools

UnitV –Digital Forensics and Investigation **12 Hrs**

Data Acquisition – Computer Forensics Tools – Computer Forensics Analysis and Validation – Recovering Graphics Files – Email Investigations – Cell Phone and Mobile Device Forensics

Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

- To prepare student in finding, isolating, and troubleshooting network faults in the fastest way possible.
- To impart the functionality of layered network architecture.
- Explain students how to design networks and protocols for diverse situations

COURSE OUTCOMES (COs) : (3- 5)At the end of this course the students would be able to

CO1	Analyse the requirements for a given organizational structure and select the most appropriate networking architecture and technologies
CO2	Analyse, specify and design the topological and routing strategies for an IP based networking infrastructure
CO3	Understand various protocols for network security to protect against the threats in the networks.
CO4	Compare and contrast technologies in networking and security designed to solve similar problems
CO5	Students will know how to administer a small, medium, or large network infrastructure including server and node management

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

Subject Code: HMCF22003	Subject Name	Ty/Lb/ETL	L	T/S.Lr	P/R	C
	NETWORK TROUBLE SHOOTING AND SECURITY	Ty	3	1/0	0/0	4

Unit I – Introduction **12Hrs**

Seven layers in action –Troubleshooting Layer 3 Problems- Network security model classical Encryption techniques (Symmetric cipher model, substitution techniques, transposition Techniques, steganography).–Topology – Cabling - Networking Industry Standards IEEE - Ethernet topology.

Troubleshooting Network Performance Issues -Baseline Network Performance-Collect Network Device Performance Metrics - Switch/Router CPU Utilization - Switch/Router Memory Utilization - Interface/Bandwidth Utilization.

Unit II - TCP/IP Basics & Routing **12 Hrs**

Introduction to MAC address - Introduction to IP address - Classes of IP address - Need for subnetting - Basics of IPV6 - Static IP addressing, Dynamic IP addressing, Special IP addresses - Tools for Troubleshooting IP Problems - How routers work - Routing tables - Network Address Translation - Dynamic routing – distance vector, link state – EIGRP – OSPF - Troubleshooting Hot Standby Router Protocol (HSRP) -Dynamic routing – Working with routers - Connecting to routers, basic router configuration, router problems.

Troubleshooting Bandwidth and Traffic - NetFlow -Applications-Protocols-Troubleshooting Configuration Issues-Tools for Network Troubleshooting.

Unit III - Packet Switched Connection **12 Hrs**

Types of connections – Circuit switched, Packet switched - Why packet switched is preferred - Types of protocols and need for protocols - Packet switched Protocols - TCP/ IP - RSA Algorithm - Knapsack Algorithm - Blowfish Algorithm - General IP Troubleshooting Theory and Suggestions

Unit IV - TCP/IP Applications **12 Hrs**

Origins of TCP/ IP and evolution of Internet - IP Layers Vs OSI - IP number concepts - Network address - Classes of Networks-Subnet masking - Static and dynamic IP numbers - UDP - Establishing a TCP session (Three way handshake) - Troubleshooting Physical Connectivity Problems -Name to address translation - Domain Name System - Transport layer protocols –TCP, UDP, ICMP, IGMP – the power of port numbers - registered ports, connection status, rules for determining good vs. bad communications – Common TCP/IP applications - the world wide web, Telnet, Email, FTP, Internet applications

Unit V - Network Naming **12Hrs**

Introduction to Domains and Work Groups - Network naming – DNS – how DNS works, DNS servers Troubleshooting DNS – WINS – Configuring WINS clients, Troubleshooting WINS – Diagnosing TCP/IP Networks - Introduction to ADS (Active Directory Service) - File sharing within network - Understanding DHCP - Introduction to Mail Exchange server and ISA server - Network operating system - Client Server applications - Peer to Peer Applications - Measuring performance - Monitoring tools.

T/L/ETL : Theory / Lab / Embedded Theory and Lab

OBJECTIVES :

- Design and formulation of research problem.
- Analyze research related information and statistical methods in research.
- Carry out research problem individually in a perfect scientific method
- Understand the filing patent applications processes, Patent search, and various tools of IPR, Copyright, and Trademarks

COURSE OUTCOMES (Cos) : (3 – 5)Students completing the course were able to

CO1	Design and Formulation of research problem.
CO2	Analyze research related information and statistical methods in research.
CO3	Carry out research problem individually in a perfect scientific method
CO4	Understand Patent Filing application Process.
CO5	Patent Search and various tools used.

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

At the end of the course students will be able to

- Handle electronic evidence using forensic standards
- Examining of File systems
- Acquisition and Analyzing Mobile Data

COURSE OUTCOMES (COs) : (3- 5)

CO1	Learn Cyber Security Fundamentals for Forensic Investigation
CO2	Perform network, mobile and computer forensic analysis using tools
CO3	Demonstrate the ability to design and create models to analyze and interpret data

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

Schedule subject to Change

1. Cyber Security Fundamentals for Forensic Investigation
2. **FAT32 File systems** - History and background on FAT - Allocation Tables - Directory Entries - Bitmaps - Deleted files and unallocated space
3. **NTFS File Systems** - History & background of NTFS - Master File Table (MFT) - MFT Entries - Deleted Entries - Unallocated space
4. **File sharing**–File sharing logs - Network logs - Advanced BitTorrent Analysis
5. **Executable File Analysis** - Static Analysis - Dynamic Analysis - Virtualization
6. **Email and Internet Analysis** - Web cache, history, bookmarks - Mail header analysis - Email server analysis - Building timelines
7. **Windows Registry** - Registry locations - Windows registry keys and values - Useful registry keys - Automated tools for registry analysis
8. Network forensics analysis using “Xplico “.
9. Perform digital forensics incident response using “CAIN-8”.
10. Perform digital forensics data analysis using “Autopsy”.
11. SIM card analysis data acquisition using SIM card reader.
12. Forensic image analysis using SANS SIFT
13. Mobile data acquisition and analysis using Mobile Check
14. Audio and Video analysis using forensic investigation
15. Documenting Evidence and Reconstructing Evidence

Total Hrs : 45

Subject Code:	Subject Name : **NETWORK TROUBLE SHOOTING AND SECURITY LAB**	Ty/Lb/ETL	L	T/S.Lr	P/R	C

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

At the end of the course students will be able to

- Understand networking protocols, and their hierarchical relationship in the context of a conceptual model
- Articulate the threats to CIA and be able to analyze a given architecture, discern vulnerabilities, and recommend physical, logical, or administrative controls to mitigate the threat
- Design an IT infrastructure including devices, topologies, protocols, systems software, management, and security

COURSE OUTCOMES (COs) : (3- 5)

CO1	Demonstrate expertise in configuring host and network level technical security controls, and host firewalls.
CO2	Design user access controls, host logging and network filtering, intrusion detection, and prevention systems
CO3	Demonstrate analytical skills in identifying and troubleshooting networking, security, and performance issues

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9

1. Packet and Protocol analysis
2. Detect man-in-the–middle (MitM), denial-of-service (DoS), and advanced persistent threat (APT) attacks.
3. Password Cracking
4. Packet capturing and sniffing
5. Configure User Datagram Protocol(UDP)
6. Configure Transmission Control Protocol(TCP)
7. Configure Dynamic Host Configuration Protocol(DHCP)
8. Configure Domain Name Server (DNS)
9. Configure File Transfer Protocol (FTP) and Hypertext Transfer Protocol (HTTP)
10. Configure SMTP, POP3 and IMAP using relevant software
11. Use Telnet to Login a remote machine
12. Configure Firewalls and IDS

SEMESTER – II

Subject Code: **HMCF22004**	Subject Name : **SECURITY OF CLOUD COMPUTING**	**Ty/Lb/ETL**	**L**	**T/S.Lr**	**P/R**	**C**
	Prerequisite: NIL	Ty	3	1/0	0/0	4

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

- To give students an overview of the field of Cloud Computing, its enabling technologies, main building block
- To bridge the gaps between traditional and cloud architectures
- To be familiar with the lead players in cloud.

COURSE OUTCOMES (COs) : (3- 5)At the end of this course the students would be able to

CO1	Understand core cloud computing concepts and fundamental principles, including standard delivery models and service designs.
CO2	Understand standard cloud security network designs and architecture models.
CO3	Analyse and design the cloud security strategy for organization.
CO4	Learns the various levels of services that can be achieved by cloud.
CO5	Identify the regulatory requirements an organization need to secure data in the cloud and the strategies in meeting those requirements.

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

Subject Code: HMCF22004	Subject Name	Ty/Lb/ETL	L	T/S.Lr	P/R	C
	SECURITY OF CLOUD COMPUTING	Ty	3	1/0	0/0	4

Unit I - Introduction **12Hrs**

Cloud Computing – Network-Centric Computing and Network-Centric Content – Cloud Delivery Models and Defining Attributes – Ethical Issues in Cloud Computing – Cloud Vulnerabilities – Cloud Computing Delivery Models and Services - Amazon Web Services - Evolution of AWS – Google Clouds – Azure and Online Services – Cloud Storage Diversity and Vendor Lock-in – Cloud Computing Interoperability – Service Level Agreements and Compliance Level Agreements – Responsibility Sharing between a User and the CSP – Software Licensing – Major Challenges faced by Cloud Computing – Evolution of Storage Technologies – Storage Models, File Systems and Databases – Distributed File System – General Parallel File System – Google File System - OLTP – Bigtable – Megastore – Storage Reliability at Scale – Disk Locality vs Data Locality – Virtualization – Peer-to-Peer Systems

Unit II - Architecture and Process **12Hrs**

Data, Thread and Task-Level Parallelism – Parallel Architectures – SIMD Architectures; Vector Processing and Multimedia Extensions – Graphic Processing Units – Speedup, Amdhal's Law and Scaled Speedup – Multicore Processor Speedup – Distributed Systems – Soft Modularity vs Enforced Modularity – Layering and Architecture – Concurrency and Cloud Computing – Communication and Concurrency in Computing – Computational Models – Model for Multicore Computing – Process State – Communication Protocols and Process Coordination – Communication, Logical Clocks and Message Deliver Rules – Runs and Cuts – Threads and Activity Coordination – Critical Sections, Locks, Deadlocks and Atomic Actions – Consensus Protocols – Load Balancing – Transformation of Internet - Interconnection Networks for Computer Clouds – Multistage Interconnection Network – Infinib and Myrinet – Network Resource Management algorithms – Content Delivery Networks – Vehicular Ad Hoc Networks

Unit III - Cloud Computing Security Fundamentals **12Hrs**

Cloud Delivery Models - Cloud Deployment Models - Cloud Information Security Objectives - Cloud Security Services - Cloud Security Design Principles - Secure Cloud Software Requirements - Cloud Security Policy Implementation - Secure Cloud Software Testing - Cloud Penetration Testing - Cloud Computing and Business Continuity Planning/Disaster Recovery - The CIA Triad - Privacy and Compliance Risks - Common Threats and Vulnerabilities - Cloud Access Control Issues - Cloud Service Provider Risks - Security Policy Implementation - Computer Security Incident Response Team - Virtualization Security Management - Architectural Considerations - Trusted Cloud Computing - Identity Management and Access Control - Access Control - Autonomic Security

Unit IV Cloud Computing Security **12 Hrs**

Understanding Cloud Computing - The IT Foundation for Cloud - Roots of Cloud Computing - A Brief Primer on Security - Security Architecture - Cloud Is Driving Broad Changes - Cloud Computing: Security Concerns - Assessing Your Risk Tolerance in Cloud Computing - Legal and Regulatory Issues - Security Requirements for the Architecture - Security Patterns and Architectural Elements - Cloud Security Architecture - Planning Key Strategies for Secure Operation - Overview of Data Security in Cloud Computing - Data Encryption: Applications and Limits - Cloud Data Security: Sensitive Data Categorization - Cloud Lock-in

Unit V – Securing Cloud **12Hrs**

Overall Strategy: Effectively Managing Risk - Overview of Security Controls - The Limits of Security Controls - Best Practices - Security Monitoring - Private Clouds - Security Criteria for Ensuring a Private Cloud - Selecting a CSP: Overview of Assurance - Overview of Risks - Security Criteria - Evaluating Cloud Security - Checklists for Evaluating Cloud Security - Metrics for the Checklist - From Architecture to Efficient and Secure Operations - Security Operations Activities

Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

- Covers the theoretical bases for cyber threats and vulnerabilities, and delves into selection and application of penetration testing methodologies
- Covers the main techniques used by computer hackers and penetration testers in order to better defend against intrusions and security violations in live systems.
- Become familiar with the entire penetration testing process including planning, reconnaissance, scanning, exploitation, post-exploitation and result reporting.

COURSE OUTCOMES (COs) : (3- 5)At the end of this course the students would be able to

CO1	Understand different types of vulnerabilities and assessments and perform penetration testing
CO2	Perform risk assessment of hacked or compromised Application, Service, Desktop or a server
CO3	Students understand the basic of vulnerability assessment & penetration testing
CO4	Plan and perform penetration testing and establish robust security to protect an organization's information systems from cyber-attacks
CO5	Identify methodologies to document, report on, and provide a clear roadmap for remediation of exposed security issues.

UnitI - Introduction to Vulnerability Assessment and Penetration Testing **9 Hrs**

What is VA & PT? – Need & Benefits of VA & PT – Types of VA & PT – Application – How is VA & PT performed – Challenges & Limitations of VA & PT – Skillset Required – Ethics

Unit II - Hacking Methodology **9 Hrs**

Hacking Methodology, Process of Malicious Hacking, Footprinting and Scanning: Footprinting, Scanning. Enumeration: Enumeration. System Hacking and Trojans: System Hacking, Trojans and Black Box Vs White Box Techniques

Unit III- Web and Network Hacking Vulnerability Assessment **9 Hrs**

SQL Injection, Hacking Wireless Networking, Viruses, Worms Denial of Service, Sniffers, Session Hijacking and Hacking Web Servers: Session Hijacking, Hacking Web Servers. Web Application Vulnerabilities and Web Techniques Based Password Cracking: Web Application Vulnerabilities, Web Based Password Cracking Techniques

Unit IV- Penetration Testing **9 Hrs**

Pen Testing Strategies - Usefulness of Test Results – Assets Connection Testing – Security Risk Assessment – Manual VS. Automated Testing – Various Tools for PT

Unit V - Report Writing and Mitigation **9 Hrs**

Introduction to Report Writing & Mitigation, requirements for low level reporting & high level reporting of Penetration testing results, Demonstration of vulnerabilities and Mitigation of issues identified including tracking

OBJECTIVES :

- To enhance technical, communication, problem solving and teaming skills, as they relate to the study of Information Security and Information Assurance.
- Security vulnerabilities that affect operating systems and how they can be mitigated.
- Access controls and authentication as they are used to secure systems and how they can be mitigated.

COURSE OUTCOMES (COs) : (3- 5)At the end of this course the students would be able to

CO1	Understand Digital Rights Management concepts and schemes.
CO2	Analyse security measures implemented in process and memory management.
CO3	Learns the complexity of authentication protocols.
CO4	Identify the protocols to secure information during transmission.
CO5	Introduce security controls in applications.

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

Subject Code: HMCF22006	Subject Name	Ty/Lb/ETL	L	T/S.Lr	P/R	C
	ADVANCED INFORMATION SECURITY	Ty	3	0/0	0/0	3

Unit I – Digital Rights Management **8Hrs**

DigitalRights Management - Meaning of Digital Rights Management (DRM) - Need for DRM and preventing illegal file sharing on the Internet - DRM schemes - Microsoft DRM 2.0, and the Content Scrambling System - Reasons why DRM schemes have been unsuccessful so far - Requirements for a good DRM scheme - secure hardware, secure software, and an efficient legal system

Unit II- Operating System and Security **12Hrs**

Overview of operating systems, functionalities and characteristics of OS - concept of a process, operations on processes, process states, concurrent processes, process control block, process context - Interrupt processing, operating system organization - Job and processor scheduling, scheduling algorithms, process hierarchies - Problems of concurrent processes, critical sections, mutual exclusion, synchronization, deadlock – Inter process Communication (IPC), Message Passing, Direct and Indirect - Deadlock: prevention, detection, avoidance - Memory organisation and management - Virtual memory concepts, paging and segmentation - File organization and directory structure - OS and Security - Security breaches - Types of attacks - Attack prevention methods - Access control lists – support for internet and general network security.

Unit III – Authentication Protocols **8Hrs**

Common Authentication Protocols - Authentication concepts - Various authentication protocols - Password Authentication Protocol (PAP) - Challenge Handshake Authentication Protocol and MS Chap - Extensible Authentication Protocols - Remote Access with RADIUS and TACACS - Single Sign on – Kerberos, SEASAME – Authentication in Wireless networks

Unit IV – Security Protocols **8Hrs**

Real World Protocols – IPSec, SSL, IKH, AH and ESP - Introduction to IPSec - IPSec building blocks - Security Associations (SAs) - Security Parameter Index (SPI) - IPSec Architecture - IPSec Protocols - Authentication Header (AH) - Encapsulation Security Payload (ESP) - Tunneling and Transport Mode - Internet Key Exchange (IKE) – ISAKMP

Unit V – Application Security **9Hrs**

Application System Security - SDLC concepts - Different SDLC and cost estimation models - Testing: types, methods and issues - Program coding and security to be built into it - Software maintenance and change control processes - Configuration management - Software Capability Maturity model (CMM) - DBMS concepts & terms: types, with focus on Relational model - Data dictionary – Interfaces to databases (ODBC, ADOJDBC, XML) - Database security features - User access rights – Database auditing features and logs.

OBJECTIVE: .

- To introduce fundamental aspects of Intellectual property Rights to students who are going to play a major role in development and management of innovative projects in industries.
- To develop expertise in the learners in IPR related issues and sensitize the learners with the emerging issues in IPR and the rationale for the protection of IPR.

COURSEOUTCOMES(COs):The students will be able to

CO1	Imbibe the knowledge of Intellectual Property and its protection through various laws.
CO2	Apply the knowledge of IPR for professional development
CO3	Develop a platform for protection and compliance of Intellectual Property Rights & knowledge
CO4	Create awareness amidst academia and industry of IPR and Copyright compliance
CO5	Deliver the purpose and function of IPR and patenting

Unit I **9Hrs**

Introduction to IPRs, Basic concepts and need for Intellectual Property – Meaning and practical aspects of Patents, Copyrights, Geographical Indications, IPR in India and Abroad .Nature of Intellectual Property, Industrial Property, technological Research, Inventions and Innovations – Important examples of IPR.

Unit II **9Hrs**

Intellectual Property Rights. The IPR tool kit, Patents, the patenting process, Patent cooperation treaties: International Treaties and conventions on IPRs: Trade Related Aspects of Intellectual Property Rights Agreement, Patent Cooperation Treaty, Patent Act of India, Patent Amendment Act, Design Act, Trademark Act, Geographical Indication Act.

Unit III **9Hrs**

Intellectual Property Protections IPR of Living Species, protecting inventions in biotechnology, protections of traditional knowledge, biopiracy and documenting traditional knowledge, Digital Innovations and Developments as Knowledge Assets – IP Laws, Cyber Law and Digital Content Protection. Case studies: The basmati rice issue, revocations of turmeric patent, revocation of neem patent.

Unit IV **9Hrs**

Exercising and Enforcing of Intellectual Property Rights Rights of an IPR owner, licensing agreements, criteria for patent infringement. Case studies of patent infringement, IPR – contract, unfair competitions and control, provisions in TRIPS,

Unit V **9Hrs**

Role of Patents in Product Development & Commercialization Recent changes in IPR laws impacting patents and copy rights, intellectual cooperation in the science and allied industry. Patentable and non-patentable research. Case studies .

Subject Code: **HMCF22L03**	Subject Name : **INFORMATION SECURITY TOOLS AND TECHNOLOGIES LAB**	**Ty/Lb/ETL**	**L**	**T/S.Lr**	**P/R**	**C**
	Prerequisite: NIL	Lb	0	0/0	4/0	2

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

- Students will enhance technical, communication, problem solving and teaming skills, as they relate to the study of Information Security and Information Assurance.
- Students get exposed to cryptography, intrusion detection systems, data firewalls, and malicious software.
- Students will learn about the threats against an organization's digital assets, as well as the tools and methods to mitigate those threats.

COURSE OUTCOMES (COs) : (3- 5)At the end of this course the students would be able to

CO1	Find the security loopholes in a network or software system.
CO2	Assesses gaps and weaknesses in information systems and computer networks.
CO3	Independently present and perform demonstrations of pen-tests

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9

	Prerequisite: NIL	Lb	0	0/0	4/0	2

1. Monitoring Network Traffic
2. Host & Services Discovery using Nmap
3. Vulnerability Scanning using OpenVAS
4. Internal Penetration Testing
   - Mapping
   - Scanning
   - Gaining access through CVE's
   - Sniffing POP3/FTP/Telnet Passwords
   - ARP Poisoning
   - DNS Poisoning
5. External Penetration Testing
   - Evaluating external Infrastructure
   - Creating topological map & identifying IP address of target
   - Lookup domain registry for IP information
   - Examining use of IPV6 at remote location
6. Dumping Windows Password Hashes
7. Cracking windows Password Hashes
8. Keylogging

OBJECTIVES :

At the end of the course students will be able to

- Understands encryption and hashing techniques
- Collect and analyze data
- Understand the characteristics of Digital Certificates

COURSE OUTCOMES (COs) : (3- 5)At the end of this course the students would be able to

CO1	Install and configure software and tools
CO2	Use appropriate tools to evaluate security threats
CO3	Generate and implement digital certificates

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

1) Use of security tools like
    a) Freeware Vulnerability Scanners
    b) Freeware Packet Analysers
    c) Disk Editors
    d) Backup Tools
    e) Firewalls
2) Installing typical operating systems and hardening them
3) Identifying missing security patches for typical OS
4) Installing and Configuring anti-virus suites
5) Interpreting email headers
6) Collecting data about internet websites from public sources
7) Exercises in using check digits
8) Simple exercises in encryption and hashing tools and understanding effect of tampering data
9) Obtaining Digital Certificates of a few sites and interpreting their features
10) Generating digital certificates and validating them in a private LAN

Total Hrs: 45

Subject Code: **HMCF22I01**	Subject Name : **SUMMER INTERNSHIP**	**Ty/Lb/ETL**	**L**	**T/S.Lr**	**P/R**	**C**
	Prerequisite: NIL	IE	0	0/0	4/0	2
L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab						

Students are supposed to undergo internship in related Industries for a minimum period of 30days cumulatively during the semester. They have to prepare a report on the Internship with a certificate in proof from competent authority in the industry. At the end of the semester Viva-Voce examination will be conducted by the Examiners duly appointed by the Head of the department and the students will be evaluated.

SEMESTER – III

Subject Code: **HMCF22007**	Subject Name : **MALWARE ANALYSIS AND SECURITY**	**Ty/Lb/ETL**	**L**	**T/S.Lr**	**P/R**	**C**
	Prerequisite: NIL	Ty	3	1/0	0/0	4

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

- To introduce the fundamentals of malware, types and its effects
- To identify and analyze various malware types
- To deal with detection, analysis, understanding, controlling, and eradication of malware

COURSE OUTCOMES (COs) : (3- 5)At the end of this course the students would be able to

CO1	Understand the concept of malware analysis, types of malware analysis and differentiate malware and a virus
CO2	Learn Dynamic analysis tools and their features, steps involved in dynamic analysis
CO3	Design security strategies withsandboxes and multi-AV scanners
CO4	Identify and correlate information regarding domains, hostnames, and IP addresses
CO5	Analyse the challenges encountered in the field of malware analysis

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

	MALWARE ANALYSIS AND SECURITY	Ty	3	1/0	0/0	4

Unit I - Malware Analysis Introduction **12 Hrs**

Malware – Malware Analysis – Why malware analysis - Malware categories – Malware analysis techniques: Static malware analysis – Dynamic Malware Analysis – Analysis tools – Sandbox tools and techniques

UnitII - Static Analysis and Dynamic Analysis **12Hrs**

Identifying file type using manual method, using tools – Hashing – Multiple antivirus scanning – String extraction – File obfuscation – Inspecting PE header information – Comparing and classifying the malware
Monitoring system and networks – dynamic analysis tools: Monitoring with process monitor, viewing processes with process explorer, Comparing registry snapshots with Regshot, Packet sniffing with Wireshark - Dynamic Analysis steps

Unit III- Scanning and Analyzing Malware **12Hrs**

Scanning files with virus total, Jotti, NovirusThanks – Multi-Antivirus Scanner Comparison - Analyzing malware with threat expert, CW sandbox, Anubis - Identifying malware passwords - Bypassing authentication - Advanced malware analysis Virus, Trojan.

Unit IV - Domain and IP addresses research **12Hrs**

Researching domains - WHOIS with Sysinternals on Windows – Resolving DNS hostnames on Windows – Researching IP addresses - Researching with Passive DNS and Other Tools – Performing a reverse IP search with domain tools – Brute force attack – Reverse Brute Force attack

Unit V - Malware Challenges **12Hrs**

Antimalware – Anti malware strategy – Anti malware engine – Common challenges – Scanning approaches - Virtual environment - Live internet connection - Real, fake, and virtual services -Anti-debug

OBJECTIVES :

This paper will provide a detailed knowledge on:

- Cyber Crime behaviour and the concepts of Cyber Crime
- Forms of Cyber Crime
- Cyber Crime modus operandi

COURSE OUTCOMES (COs) : (3- 5)At the end of this course the students would be able to

CO1	Introduces Cyber Crime and Cyber Criminology
CO2	Explains different forms of Cyber Crimes
CO3	Describe the theories of Cyber Crime
CO4	Describe Cyber Crime Behaviour
CO5	Maintain public order and safety enforce the law, and prevent, detect, and investigate criminal activities.

Subject Code: HMCF22008	Subject Name	Ty/Lb/ETL	L	T/S.Lr	P/R	C
	CYBER CRIMINOLOGY AND LAW ENFORCEMENT	Ty	3	0/0	0/0	3

Unit I – Introduction **8Hrs**

Understanding Crime and Concepts of Crime: Definitions of Crime, Cyber Crime, Cyber Criminology, Tort, Misdemeanour, Felony, Elements of Crime – Actus Reus and Mens Rea, Cyber Security, Cyber Forensics, Information Security Auditing, Governance Risk and Compliances, Embedded Security Systems, Uniqueness of Cyber Crimes.

Unit II -Types and Classification of Crimes **11Hrs**

Classification from Indian Penal Code: Crimes Against Persons, Crimes Against Properties, Crimes Against the Nation – Theft, Robbery, Dacoity, Burglary, Criminal Misappropriation, Criminal Breach of Trust, Arson, Vandalism, Chain Snatching, Pick Pocketing, Murder, Rape, Hurt, Grievous Hurt, Culpable Homicide Not Amounting to Murder, Terrorism, Nuisance, Offences Against Public Tranquillity, Unlawful Assembly., Special Crimes – Child and Woman Trafficking, Organized Crimes, Terrorism, Corruption, Money Laundering, Economic Offences, Media Crimes, White Collar Crimes.

Unit III – Theories of Crime **9 Hrs**

Cyber Criminal Behaviour – Types of Cyber Criminals – Theories relating to Cyber Criminal Behaviour – Sociological Theories: Sutherland's Differential Association Theory, Broken Window Theory, Rational Choice Theory, Routine Activity Theory, Opportunity Structure Theory, Travis Hirschi's Social Bond Theory, Law of Imitation Theory by Gabriel Tarde, Social Learning Theory of Albert Bandura, Techniques of Neutralization Theory by David Matza.

Unit IV - Cyber Criminal Behaviour **8Hrs**

Psychological Theories – Motivation: Maslow's Theory of Hierarchy, Frustration, Personality theories – Sigmund Freud's Theory, Erickson's Theory, Theories of Intelligence, IQ, EQ and its relationship with cybercrimes, Understanding Emotions and Types of Emotions, Criminal Psychology.

Unit V - Law Enforcement **9 Hrs**

Understanding Law Enforcement – Three Pillars of Criminal Justice System – Police, Judiciary, Correctional Agencies – Police: Definition, Functions and Duties of Police, Hierarchy of Police – State and Central, Powers of Police, Police and Investigation, Records maintained In a Police Station – FIR, Charge Sheet, Cyber Crime Police Stations, Judiciary – Courts, Hierarchy of Courts, Functions of Courts, Special Courts, Cyber Appellate Tribunals, Trial, Examination and Cross Examination in the Courts, Functionaries in a Court.

OBJECTIVES :

- Understand hacking methods
- Learn various biometric and payment modes
- Implement mobile application
- Handle logs

COURSE OUTCOMES (COs) : (3- 5)At the end of this course the students would be able to	
CO1	Understands various hacking methods and countermeasures.
CO2	Identify the security technologies for securing application
CO3	Design security policy for survival of applications
CO4	Design secured mobile applications
CO5	Use tools and software to analyse issues and report

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

OBJECTIVES :

This paper will help a student to understand:

- The Email infrastructure and its components.
- The Email etiquette, Corporate practices and policies.
- The Email security, attacks and email related crimes.
- The Email Forensics and email header analysis.

COURSE OUTCOMES (COs) : (3- 5)At the end of this course the students would be able to

CO1	To guide students in leveraging the unique features and functionality of Email Security to implement breach prevention against a broad spectrum of cyber threats that use email as a vector.
CO2	Learn the role of email security in the workplace as well as why it's important and how to keep staff and the organisation protected
CO3	Assess email security detection capabilities and benefits of Email Security
CO4	Review common email frauds, crimes and attack methods
CO5	Demonstrate knowledge of the email analysis process

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

UnitI - Introduction to Email **9 Hrs**

Evolution of Communication System – Postal Communication System – Analogy of Email System - How email system works? – The role of Mail User Agent, Mail Delivery Agent, Mail Transfer Agent, and DNS Servers - An overview of various protocols SMTP, POP, IMAP - involved in a typical email infrastructure – Characteristics of an Email - Advantages of Email communication system.

Unit II - Email Etiquette and Corporate Practices **10 Hrs**

Significance of Email etiquette – Standard fonts and formatting – Subject Line – Professional email address – Greetings message – Introduction – Culture – Reply All options – Use of sentence case – Email attachments – Proof read – Be positive – Revert as soon as possible – Professional tone – Recipient ID validation – Beware of Malicious and shorten URLs – Configuring email signatures, Out of Office – Auto replies – Email Policies and corporate practices – Personal Use – Misuse of email infrastructure – DLP – Data Leak Prevention / Data Loss Prevention Policy – Email Archive.

Unit III - E-mail Security **11 Hrs**

A brief introduction to security issues relevant to emails as well as the typical email infrastructure - Entities in an Email infrastructure - Risks to an Email infrastructure – Threats, Vulnerabilities, Exploits and Impact with respect to Email Users, Mail clients, Mail Server, Email Protocols - SMTP, IMAP4 and POP3 - How to secure the email infrastructure – Management Controls, Operational Controls, Technical Controls with suitable examples for Confidentiality, Integrity and Availability – Implementation of controls to secure the email infrastructure – Information asset classification and handling – Physical protection – Securing email server applications. Transmission and supporting operating environment.

Unit IV - Email Frauds and Crimes **7 Hrs**

Email related crimes – Email Spoofing – Email Phishing and Countermeasures – Email Bombing – Spam Emails – Email Frauds – Email Hacking – Spreading malicious codes through Emails and Countermeasures – Nigerian Fraud – Defamatory emails – Threatening Emails – Case studies.

Unit V - Email Forensics **8 Hrs**

IP address management - IANA – WHOIS.com – Regional Internet Registries - Understanding message headers – Email Header Analysis – Online Email tracer tool – MX Tool Box Email Header analysis – SPF – DKIM – DMARC – How to identify spoofed emails – Origin hostname, IP address trace and validation – Email traversal path analysis – Date and time stamp analysis – Email attachment analysis - Email Investigation – Case studies – The Offer of Money – The Alert – Phishing Email – The Inside Scoop – The Masked Email – The Big Lie – The Little Lie.

Total Hrs: 45

Subject Code: **HMOL22IE1**	Subject Name : **OPEN ELECTIVE (SELF STUDY PAPER) – SWAYAM / NPTEL / ANY MOOC**	**Ty/Lb/ETL**	**L**	**T/S.Lr**	**P/R**	**C**
	Prerequisite: NIL	IE	3	0/0	0/0	3
L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab						

Open Elective (On Line Course through NPTEL/SWAYAM/Any MOOC)

Students should register for the online course with a minimum course duration of 8 weeks through the online portals such as NPTEL/SWAYAM/Any MOOC in the beginning of the semester. The course can be core/interdisciplinary in such a way that the same course is not repeated during the course of study.

Students are expected to attend the online classes regularly and submit the weekly assignments before the due dates. Students should appear for the online examination and submit the certificate at the end of the semester. Internal examination will be conducted by the examiners duly appointed by the head of the department.

Subject Code: **HMCF22I02**	Subject Name : **PROJECT PHASE 1**	**Ty/Lb/ETL**	**L**	**T/S.Lr**	**P/R**	**C**
	Prerequisite: NIL	IE	0	0/0	4/0	2
L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab						

Students are expected to do the Project individually. They should identify the area/topic of the Project and should collect the literatures related to the project. Students intending to do Industrial projects will approach the industries with the support of the university, identify the industrial problem and finalize the project. In case of Industrial projects apart from Industry guide, an internal guide has to be appointed by the department. At the end of the Semester the students should submit their Project Phase - I report to the Department and Viva -Voce examination will be conducted by the examiners duly appointed by the Head of the department.

SEMESTER – IV

Subject Code: **HMCF22L05**	Subject Name : **PROJECT PHASE 1I**	**Ty/Lb/ETL**	**L**	**T/S.Lr**	**P/R**	**C**
	Prerequisite: NIL	Lb	0	0/0	18/0	9
L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab						

MAJOR PROJECT

To make the students to make use of the knowledge and skill developed during their four years of study and to apply them for making an innovative product/process for the development of society and industries.

Students are expected to do a Project work either in an Industry or at the University in the field of relevant field /inter-disciplinary /multi-disciplinary area . The work to be carried out in Phase II should be continuation of Phase I. Each student will be allotted a guide based on the area of Project work. In case of industrial Project external guide has to be allotted from Industry. Inter disciplinary/multi-disciplinary project can be done with guidance of relevant department. Monthly reviews will be conducted during the semester to monitor the progress of the project by the project review committee. Students have to submit the Project thesis at the end of the semester and appear for the Project Viva-Voce examination conducted by the examiners duly appointed by the Controller of Examination. In case of industrial project certificate in proof has to be included in the report along with the bonafide certificate.

Subject Code: **HMCF22I03**	Subject Name : **RESEARCH PUBLICATION**	**Ty/Lb/ETL**	**L**	**T/S.Lr**	**P/R**	**C**
	Prerequisite: NIL	IE	0	0/0	4/0	2
L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab						

Students are supposed to prepare and publish the article based on either his term paper or area of research in peer reviewed referred journal. Code of research publication ethics should be followed. After publishing the article students should present a seminar in presence of department faculties and PG students. At the end of semester viva examination will be conducted by the examiners appointed by the Head of the department.

ELECTIVE I

Subject Code: **HMCF22E01**	Subject Name : **FORENSIC SCIENCE AND CRIME INVESTIGATION**	**Ty/Lb/ETL**	**L**	**T/S.Lr**	**P/R**	**C**
	Prerequisite: NIL	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

1. To understand the history and development of forensic science.
2. To understand the roles of different types of professionals involved in evaluating a crime scene, analysis of crime exhibits and expert witness.
3. To understand the methodology to collect, preserve and present evidence in a professional (courtroom) setting.

COURSE OUTCOMES (COs) : (3- 5)

CO1	Understand the history of the forensic sciences and the aspects of the justice system followed.
CO2	Assess a crime scene and collecting the evidence
CO3	Learn the methodology of collecting sample, interpreting data, avoiding contamination, and preservation of chain of custody
CO4	Define the importance pertaining to forensic examination
CO5	Present evidence in a professional (courtroom) setting

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

Subject Code: HMCF22E01	Subject Name	Ty/Lb/ETL	L	T/S.Lr	P/R	C
	FORENSIC SCIENCE AND CRIME INVESTIGATION	Ty	3	0/0	0/0	3

Unit I - Introduction to Forensic Science **9 Hrs**

History and Development of Forensic Science - Functions of the Forensic Scientist –Divisions of Forensic Science – Forensic Setup in India - Evolving Forensic Science Services- Role of forensic expert in the court of law - Aspects of the Criminal Justice System - Aspects of Trials.

Unit II- Crime Scene Investigation **9 Hrs**

:Concepts – Nature and type of crime scene – Crime scene search methods: Recovery and packaging of evidences – Crime scene documentation - Preservation of evidences – National and International scenario on crime scene investigation – Physical evidences

Unit III - Crime Scene Reconstruction (CSR) **10 Hrs**

Nature and importance of CSR– Basic principles and stages involved – Types and classification of reconstruction – Pattern evidence and shooting scene reconstruction – Manual and computer -assisted reconstruction of BPA – Role of logic in CSR – Writing a reconstruction report – Correlation of crime scene analysis with behavioural analysis – Cases of special importance pertaining to forensic examination

Unit IV- Forensic Analysis **7 Hrs**

Basics of Forensic Biology – Forensic Serology – DNA Typing – Forensic Chemistry – Forensic Toxicology – Forensic Medicine.

Unit V- Cyber Crime & Computer Forensics **10 Hrs**

How Does the Computer Work - How Data Is Stored -Processing the Electronic Crime Scene - Evidentiary Data– Cyber Crimes –Computer Crime Scene Investigation – Computer Forensic Analysis – - Voice identification – Forensic Psychology –Polygraph - Narco - analysis – Brain fingerprinting – Criminal profiling and their legal status in India

Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

- To educate the various causes responsible for banks frauds.
- To spread awareness of fraud and risks that could cause great harm and losses to financial organizations.
- To build confidently in students to accept higher roles and responsibilities requiring close supervision of end-to-end operations to prevent fraud

COURSE OUTCOMES (COs) : (3- 5)

CO1	Understand how bank frauds, Credit frauds and Money laundering are organised
CO2	Examines the issue of frauds from the perspective of banking industry, credit frauds and money laundering methods in existing application
CO3	Identify suitable countermeasures for Bank frauds
CO4	Secure Mobile Application
CO5	Design security system to protect bank accounts and assets

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

OBJECTIVES :

- To explain the fundamental techniques adopted in developing secure web based applications.
- To identify the vulnerabilities of web based applications and to protect those applications from attacks
- To understand security-related issues in Web-based systems and applications.

COURSE OUTCOMES (COs) : (3- 5)

CO1	Understand the fundamentals of web application, web security vulnerabilities and principlesand also learn some popular methods of classifying threats and prioritizing them on risk factors.
CO2	Students will learn and be able to apply computer security concepts to designing a web application which is robust to known and unknown attacks.
CO3	Students detect all underlying flaws, such as functional disparities, security breaches, vulnerability assessment, and authentication and authorization management.
CO4	Develop a security strategy and solution for securing web-based applications.
CO5	Integrate application security tools into application development environment and make this process and workflow simpler and more effective.

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

ELECTIVE II

Subject Code: **HMCF22E04**	Subject Name : **VIGILANCE AND SECURITY MANAGEMENT**	**Ty/Lb/ETL**	**L**	**T/S.Lr**	**P/R**	**C**
	Prerequisite: NIL	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

- To develop the knowledge and skills required to effectively lead and facilitate investigations.
- To train and develop the security professionals to handle the issues related to vigilance and investigation.
- To provide basic conceptual understanding of disaster management theory, policy and practice

COURSE OUTCOMES (COs) : (3- 5)

CO1	Understand the fundamentals of investigation and its types and effectively plan an investigation strategy.
CO2	Acquire solid grounding in assessing all key aspects of vigilance
CO3	Understand the common physical security measures, threats, risk reduction and good practices.
CO4	State security and safety practices
CO5	Use various methods and techniques for appropriate and timely preparation and mitigation of disasters

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

OBJECTIVES :

- Build strong foundations in core areas of Artificial Intelligence and Machine Learning
- Develop professionals with high competency in recent tools and techniques related to Artificial Intelligence and Machine learning.
- To teach students the key AI techniques that are being used to track cybercriminals.

COURSE OUTCOMES (COs) : (3- 5)

CO1	Gain strong theoretical foundations and practical skillsets in core areas of Artificial Intelligence to facilitate research, innovation, and product development
CO2	Analyze the applicability of AI strategies for different search methods
CO3	Understand application of ML techniques to solve real world problems from various domains such
CO4	Use AI strategies for improving applications and network security problems.
CO5	Develop interactive Artificial Intelligence systems to support digital forensics and automate the decision-making process to enable fast and reliable

Unit I - Introduction to Artificial Intelligence **9Hrs**

Brief History of Artificial Intelligence – Uses of AI in society – Software Based AI Applications – AI in Hardware Applications – Future of AI - Search Spaces – Search Trees – Goal Trees

Unit II – Search Methods **9Hrs**

Goal-Driven Search – Generate and Test – Depth-First Search – Breadth-First Search – Heuristics Search: Informed and Uninformed Methods – 8-Puzzle – Hill Climbing – Identifying Optimal Paths – Local Search and Metaheuristics – Simulated Annealing Parallel Search

Unit III – Machine Learning & Neural Network **9Hrs**

Machine Learning: Data Analysis – Perceptron –Nearest Neighbor Method – Decision Tree Learning – Cross – Validation and Over fitting – Bayesian Networks – Naïve Bayes Classifier – Clustering
Neural Network: Hopefield Networks – Linear Network – Back propagation Algorithm – Support Vector Machines –

Unit IV- Artificial Intelligence in Security **9Hrs**

OWL Ontologies in Cyber security – Identifying Targeted Software Vulnerabilities – Applying AI to detect Network Attack - Machine Learning Algorithms for Network Intrusion Detection – Android Application Analysis using Machine Learning Techniques

Unit V – Artificial Intelligence in Forensics **9Hrs**

AI in Pathology – AI in Anthropology– AI in Entomology – AI in DNA Analysis – AI detect illicit drug – AI in analysing footprint impression – AI in forensic biological hair analysis –AI in analysing Gait - AI for footwear impression analysis - Weapon detection using AI

Total Hrs: 45

Subject Code: **HMCF22E06**	Subject Name : **BUSINESS CONTINUITY PLANNING AND DISASTER MANAGEMENT**	**Ty/Lb/ETL**	**L**	**T/S.Lr**	**P/R**	**C**
	Prerequisite: NIL	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

- Provide students the fundamentals of crisis management, cyber security and business continuity management
- Ensuring Timely response to manage business continuity
- Ensuring a smooth flow of the business operations

COURSE OUTCOMES (COs) : (3- 5)

CO1	Students gain an understanding of business continuity strategies, business impact analysis, recovery point objectives (RTO and RPO), planning techniques and also how to recover from disasters.
CO2	Students analyze common organizational risks and threats to business system continuity
CO3	Apply business continuity and disaster recovery principles to enhance a business continuity plan.
CO4	Provides the necessary skills to develop a multidimensional approach for Business Continuity Plan testing and auditing.
CO5	Assess disaster recovery strategies and different standby systems and relate to recovery time

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9

		✓										

Subject Code: HMCF22E06	Subject Name	Ty/Lb/ETL	L	T/S.Lr	P/R	C
	BUSINESS CONTINUITY PLANNING AND DISASTER MANAGEMENT	Ty	3	0/0	0/0	3

Unit I - Introduction **9Hrs**

Business Continuity Planning – BCP Standards and Guidelines - Elements of Project Success – Project Plan Components – Project Organization – Project Planning – Project Implementation – Project Tracking – Key Contributors and Responsibilities - Business Continuity and Disaster Recovery (BC/DR) – Components of Business – The Cost of Planning versus the Cost of Failure – Types of Disasters – BC/DR Planning Basics – Key Concepts —Business Requirements – Functional Requirements – Technical Requirements – BC/DR Project Plan – Business Continuity Management (BCM) – Developing a BCM strategy in line with Business Strategy – Role of Business Strategy in BCP – Business Continuity and Ethics

Unit II – Risk Management **9Hrs**

Risk Management Basics –Elements of Risk Management – IT Specific Risk Management – Risk Assessment Components – Threat Assessment Methodology – Vulnerability Assessment – Type of Risk Mitigation Strategies – The Risk Mitigation Process – Developing Risk Mitigation Strategy – IT Risk Mitigation – Backup and Recovery Considerations –Assessing Risk: Determining Threats-Risk Management – Risk Manager – Risk Assessment – Emergency Incident Assessment – Business Risk Assessment – Business Impact Analysis – Information Security, IT, and Communication - Operational Risk Assessment- Practical Guidelines for Risk Assessment - Statistical Applications in Risk Management – Risk and Decision Modelling - Risk Management Checklist

Unit III– BCP Maintenance **9Hrs**

Guidelines to maintain BCP – BCP Maintenance – BCP Distribution Issues – Awareness and Training Programs – Monitor and Review – Roles and Responsibilities for Maintaining the BCP Plan – BC/DR Plan Change Management – Introduction toDisaster Management – Disaster Preparedness and Management – Preplanning for a Disaster – Developing an Action Plan – Effective Communication – Selecting the Right People – Training for success – Disaster Preparedness Assessment - Business Continuity Planning Tools

Unit IV – Testing and Auditing **9Hrs**

Testing the Business Recovery Process – Security Testing - Monitoring and Updating – Hardening Systems – Audit Objective - Auditing Fundamentals – Individual Audit Approach - Auditor's Role in Developing Security Policies – Audit Planning – Audit Deployment – BCM Audit Areas - Auditing Standards and Groups – Audit Oversight Committee- Auditing and Assessment Strategies – Basic Audit Methods and Tools – General Information Systems Audit Process – Using Nmap – Mapping the Network with Nmap – Analysing Nmap Scan Results – Penetration Testing Using Nessus – Training Staff for Business Recovery Process - Business Continuity Plan Audits - Business Continuity Checklist

Unit V – Disaster Recovery **9Hrs**

Business Disaster – Need of Disaster Plan – Seven steps in implementing Business Continuity Cycle – Phases of BC/DR– Defining BC/DR Teams and Key Personnel – Defining Tasks and Assigning Resources – Communications Plans – Event Logs, Change Control and Appendices - IT Disaster Prevention and Recovery – Special Disaster Issues

Total Hrs: 45

ELECTIVE III

Subject Code: **HMCF22E07**	Subject Name : **IoT SECURITY**	**Ty/Lb/ETL**	**L**	**T/S.Lr**	**P/R**	**C**
	Prerequisite: NIL	Ty	3	0/0	0/0	3

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

- To discuss in detail the IoT technology and its applications.
- To transfer the expertise knowledge needed to design security policies for IoT.
- To provide leaners with the required knowledge to design IoT systems.

COURSE OUTCOMES (COs) : (3- 5)

CO1	Demonstrate the knowledge of different layers IoT
CO2	Learns different architectures and driving forces
CO3	Find solutions to attack vectors on smart systems
CO4	Analyse system and apply appropriate security enabling technologies
CO5	Develop IoT applications

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9

	IoT SECURITY	Ty	3	0/0	0/0	3

Unit I – Introduction **9 Hrs**

Introduction – SWOT Analysis of IoT – New Trends in IoT – Sensors – Actuators – IoT Hardware Platform – IoT Software and Programming – IoT Protocol Stack – IoT Network and Link Layer wired and wireless – IoT Internet Layer – IoT Application Layer – IoT Case Studies

Unit II – Architecture and Methodologies **9 Hrs**

IoT Architecture – IoT Devices – Event Driven System Analysis – IoT Network Model – IoT Event Analysis – Industrial IoT - Security and Safety – Security testing of IoT Systems

Unit III – Security and Privacy **9 Hrs**

IoT as Interconnection of Threats – Sybil Attack Detection in Vehicular Networks – Solution to Attack Vectors on Smart Home System – Privacy Prevention for IoT used in Smart Buildings – Exploiting Mobility Social Features for Location Privacy Enhancement in Internet of Vehicles – Authentication in IoT – Secure Path Generation for Real Time Green Internet of Things – A User Centric Decentralised Governance Framework for Privacy and Trust in IoT

Unit IV – Securing IoT **9 Hrs**

Securing the Internet of Things - Security Architecture in the Internet of Things - Security and Vulnerability in the Internet of Things - IoT Node Authentication - Security Requirements in IoT Architecture - Security in Enabling Technologies – Blockchain Based Security for IoT Security

Unit V –IoT Applications **9 Hrs**

IoT for Smart Cities - IoT for Connected Homes - IoT for Renewable Energy - IoT in Health Care - IoT in Smart Ambulance and Emergency Medicine - IoT for Agriculture

Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

- To cover all aspects of telecommunication frauds
- To increase the knowledge regarding new techniques used by the cyber criminals
- To master the skills and knowledge investigate and prevent telecom frauds

COURSE OUTCOMES (COs) : (3- 5)

CO1	Learns basics of cellular architecture, online frauds and financial frauds
CO2	Design systems with controls to prevent internet fraud, EFT fraud and VoIP fraud
CO3	Perform Technology assessment and identify a technology to design fraud detection and preventing mechanism
CO4	Learns to handle fraud detection software and tools
CO5	Analyse internal control mechanisms and issue of frauds from the perspective of Telecom industry.

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

	TELECOM FRAUDS	Ty	3	0/0	0/0	3

Unit I –Introduction **9 Hrs**

Cellular Architecture – Vulnerabilities in Telephony – Vulnerabilities in SMS - Vulnerabilities in Cellular Network - Vulnerabilities in Voiceover IP - Telecom Fraud – Types of Telecom frauds – Categories of Telecom Frauds – Fraud Methods - Telecom Fraud Preventing –Hadoop Based Fraud Technology

Unit II –Electronic Fund Transfer Fraud (EFT) **9 Hrs**

Introduction – EFT Technologies and Services – Fundamentals of EFT Process - EFT Types - Competitive and Regulatory Environment of EFT – Privacy in EFT – Security in EFT – Equity in EFT – EFT Crimes – Analysis of EFT Crimes

Unit III –Internet Fraud **9 Hrs**

Introduction to Internet Scams and Frauds – Identity Theft – Internet Scams vs Internet Fraud – Working of Internet Fraud – Lottery Scams – Preventing Internet Fraud – Work-at-home scams – Work from Home Frauds – Anti Internet Fraud Agencies – Social Media Advertising – Net Banking Frauds –Online Payment Frauds

Unit IV–Ecommerce Fraud **9 Hrs**

Introduction – Types of Ecommerce Frauds - Fraud Basics for Online Business companies – Fraud Management concepts – Identifying Ecommerce Fraud - Fraud Prevention Techniques: Identity Proofing – Guaranteed Payments – Operational Management – Analytics – Technology –Ecommerce Fraud Detection Software and Tools

Unit V–VoIP Fraud **9 Hrs**

Introduction – Types of VoIP Frauds – Techniques for fighting VoIP Fraud –Hacking VoIP: Footprinting a VoIP Network – Scanning a VoIP Network – Enumerating a VoIP Network – VoIP Network Infrastructure DoS – VoIP Network Eavesdropping – VoIP Interception and Modification – VoIP Fuzzing – Flood-based Disruption of Service – Signalling and Media Manipulation – SPAM over Internet Telephony – Voice Phising

OBJECTIVES :

This paper deals with:

- The threats associated with mobile devices
- Architectural layers of mobile devices
- Mobile evidence types and evidence acquisition types
- Various mobile forensic tools for investigation

COURSE OUTCOMES (COs) : (3- 5)

CO1	Understands Junit in Android and various android testing techniques
CO2	Analyze the security of mobile applications running on major platforms to identify various vulnerabilities that may exists in these applications
CO3	Use modern mobile testing tools and techniques to conduct a structured investigation process to determine the nature of the crime and to produce results that are useful in criminal proceedings
CO4	Present the evidence and conclusions of an investigation in a report format.
CO5	Provide exposure to well-known and novel forensic methods using command-line and graphical open-source mobile forensics tools for examining a wide range of mobile device targets and artifacts

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

Unit I – Introduction **9 Hrs**

JUnit: JUnit Test Framework, Features of JUnit Test Framework, Testing Fundamentals-TestCase, TestSuite, TestRunners, JUnit classes, JUnit in Android, Android Testing Framework, Test Projects-Directory Structure, Android Testing API, Mock Objects, Activity Testing, what to Test, ContentProvider Testing, service Testing, choosing devices to test, Testing tools

Unit II – Mobile Apps Testing **9 Hrs**

Need of testing, Mobile applications testing landscape, Common types of testing, UI and functional testing strategies of mobile applications, compatibility testing need and methods, non-functional testing methods of mobile applications - Performance, security, types of operations testing for mobile applications - Installation, un-installation, upgrade, methods of testing the mobile application integration with phone

Unit III – Mobile Testing Tools **9 Hrs**

Testing lifecycle of mobile applications, alternatives of testing environments for mobile apps testing, Differentiate between testing on physical devices, cloud devices and emulators, different test automation tools for mobile applications, key features of monkey talk tool, installation and use of monkeytalk tool for a mobile application on emulator, installation and use of monkeytalk tool for a mobile application on PC connected device, installation and use of monkeytalk tool for a mobile web, installation and use of monkeytalk tool for a mobile application for cloud device

Unit IV – Evidences **9 Hrs**

Type of Data present in Mobile Phones - Digital Evidences found in Mobile Phones - Storage Media Available (RAM, ROM, USB, External memory Card) – different Software's and Applications used in Smart Phones

Unit IV – Forensics Procedure and Analysis **9 Hrs**

Forensic Methodology for Mobile Forensics - Best Practices while handling Mobile Devices from a Crime Scene - Seizure and Acquisition of Mobile Phones – Handling of Devices with Passcode for Mobile and Applications
Imaging Process - Mobile Device Analysis Tools and their features - Where to look for Evidence - Analysis Phase – Documentation

OBJECTIVES :

This paper deals with:

- To know the art of writing the research paper and thesis .
- To Ensure the good quality of paper at very first-time submission

COURSE OUTCOMES (COs) : (3- 5) : At the end of this course the students would be able to

CO1	Understand that how to improve your writing skills and level of readability
CO2	Learn about what to write in each section
CO3	Understand the skills needed when writing a Title

Mapping of Course Outcomes (COs) with Program Outcomes (POs)

Subject Code: **HMAC22I02**	Subject Name : **DISASTER MANAGEMENT**	**Ty/Lb/ETL**	**L**	**T/S.Lr**	**P/R**	**C**
	Prerequisite: NIL	Ty	2	0/0	0/0	0

L : Lecture T : Tutorial S.Lr : Supervised Learning P : Project R : Research C: Credits
Ty/Lb/ETL : Theory/Lab/Embedded Theory and Lab

OBJECTIVES :

Students will be able to:

- Learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- Critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- Develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
- Critically understand the strengths and weaknesses of disaster management approaches, planning and programming in different countries ,particularly their home country or the countries they work in.

COURSE OUTCOMES (COs) : (3- 5) : At the end of this course the students would be able to

CO1	Evaluate disaster risk reduction and humanitarian response policy and practice from Multiple perspectives
CO2	Develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
CO3	Understand the strengths and weaknesses of disaster management approaches, planning and programming in different countries, particularly their home country or the countries they work in.

Subject Code: HMAC22I02	Subject Name	Ty/Lb/ETL	L	T/S.Lr	P/R	C
	DISASTER MANAGEMENT	Ty	2	0/0	0/0	0

Unit I – Introduction **5 Hrs**

Disaster: Definition, Factors and Significance; Difference between Hazard and Disaster; Natural and Man made Disasters: Difference, Nature, Types and Magnitude

Unit II – Repercussions Of Disasters And Hazards **5 Hrs**

Economic Damage ,Loss of Human and Animal Life, Destruction of Ecosystem.
Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts and Famines, Landslides and Avalanches, Man-made disaster: Nuclear Reactor Melt down, Industrial Accidents, Oil Slicks and Spills, Outbreak so f Disease and Epidemics, War and Conflicts

Unit III – Disaster Prone Areas in India **5 Hrs**

Study of Seismic Zones, Areas Prone To Floods and Droughts ,Landslides and Avalanches, Areas Prone To Cyclonic and Coastal Hazards with Special Reference to Tsunami, Post-Disaster Diseases and Epidemics

Unit IV – Disaster Preparedness and Management **5 Hrs**

Preparedness: Monitoring of Phenomena Triggeringa Disaster or Hazard, Evaluation of Risk, Application of Remote Sensing, Data from Meteorological and other Agencies, Media Reports: Governmental and community preparedness.

Unit V – Risk Assessment **5 Hrs**

Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation in Risk Assessment and Warning ,People's Participation in Risk Assessment. Strategies for Survival

Unit VI – Disaster Mitigation **5 Hrs**

Meaning, Concept and Strategies of Disaster Mitigation, Emerging Trends in Mitigation. Structural Mitigation and Non-Structural Mitigation, Programs of Disaster Mitigation in India

Total Hrs: 30
